

Re: Restriction of Hazardous Substances (RoHS) & EU End-of-Life Vehicle (ELV) Directive

Dear Valued Customer;

Selective Plating's 100% Matte and Bright Tin is in compliance with the Restriction of Hazardous Substances (RoHS) and End-of-Life Vehicle (ELV) Directives. The metals lead, mercury, cadmium, and hexavalent chromium are neither present nor added in significant concentrations to our Tin plating process.

Our 100% Tin anode metal conforms to ASTM B-339 electro grade A, which states that Tin may not contain Lead of more than 0.05% by weight. This is well below the 0.1% by weight limit. The other metals are certified below detectable limits. A certificate of analysis is available upon request.

Selective Plating also employs the use of proprietary grain refiners and brighteners. These products are all certified as RoHS compliant. A letter of compliance from the manufacturer is available upon request.

Therefore, we certify that to the best of our knowledge, our 100% Tin electroplating does not contain any significant levels of lead, mercury, cadmium or hexavalent chromium and is full compliance with the requirements of the RoHS and ELV Directives.

Sincerely,

Brian Snodgrass
President
